- ⑤ setting screw
- ⑥ check valve
- ⑦ pressure gauge port

HC, KC and JPC are two way pressure compensators for modular assembling with on/off and proportional directional control valves.

They keep a constant differential pressure (Δp) across port P and port A or B in order to maintain a constant flow rate against pressure variations. Automatic piloting selection ⑥ is included.

Fixed Δp is available only for size 06. Adjustment of desired Δp is operated by loosening the locking nut ④ and turning the setting screw ⑤ of pilot device. Clockwise rotation increases Δp .

HC = ISO 4401 size 06 interface: flow up to 50 l/min.

KC = ISO 4401 size 10 interface: flow up to 100 l/min.

JPC = ISO 4401 size 16 interface: flow up to 200 l/min.

Max inlet pressure up to 350 bar.

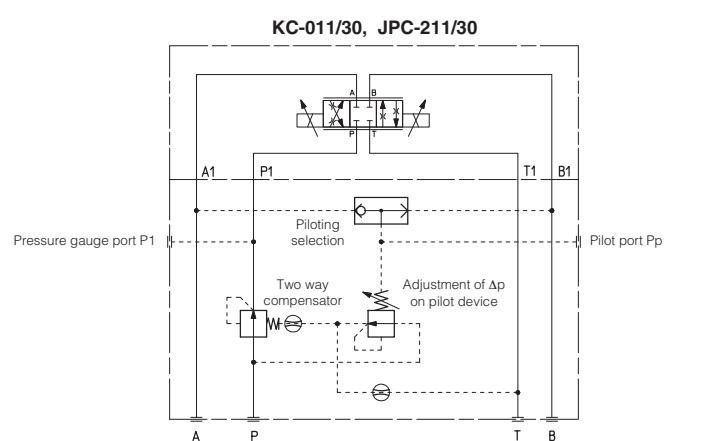

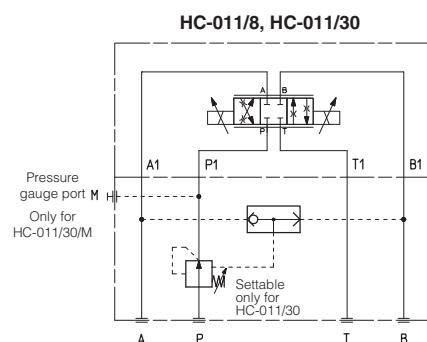

Valves are designed to operate in hydraulic systems with hydraulic mineral oil or synthetic fluid having similar lubricating characteristics.

2 HYDRAULIC CHARACTERISTICS

Hydraulic configuration

Valve model	HC-011/8	HC-011/30	KC-011/30	JPC-211/30
Max flow [l/min]		50	100	200
Max inlet pressure [bar]			350	
Regulating Δp (1) [bar]	8	5 - 35	5 - 35	

(1) The Δp for single flow path is fixed at 8 bar or is adjustable between 5 and 35 bar; it corresponds to values of total Δp across the valve of 16 bar or between 10 and 70 bar. Threaded plugged ports Pp and P1 are suitable for pressure adjustment or check of Δp value for single flow path (reading difference between Pp and P1 values).
